

UTM – FC DIGITAL FORENSIC
UNIVERSITI TEKNOLOGI MALAYSIA

DIGITAL FORENSIC (MECR1033)

LAB 4

*Investigate Web browsing Histories with
“BrowsingHistoryView” Tools*

STUDENT NAME : KEERTENNAH DEVI A/P PONNAMBALAM

LECTURER NAME : ASSOC.PROF.TS.DR. SITI HAJAR OTHMAN

MATRICS NO. : MEC254026

SESSION : 2025/2026-1

SECTION : 52

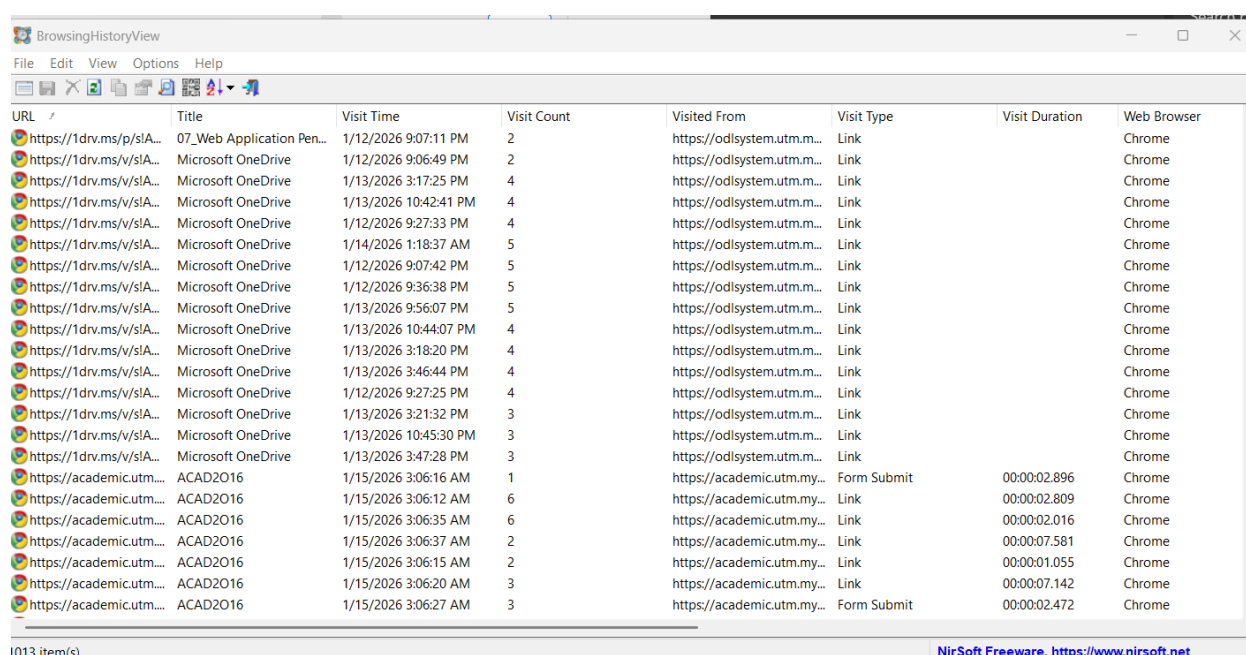

Instruction: Complete all the following practices.

INFO: BrowsingHistoryView software

- 1) **TurnedOnTimesView** is a utility that reads the history data of different Web browsers (Mozilla Firefox, Google Chrome, Internet Explorer, Microsoft Edge, Opera) and displays the browsing history of all these Web browsers in one table.
- 2) The browsing history table includes the following information: *Visited URL, Title, Visit Time, Visit Count, Web browser and User Profile.*
- 3) The tools allow you to watch the browsing history of all user profiles in a running system, as well as to get the browsing history from external hard drive.
- 4) You can also export the browsing history into csv/tab-delimited/html/xml file from the user interface, or from command-line, without displaying any user interface.

TASK 1: Download and run BrowsingHistoryView

- Download and run BrowsingHistoryView from NirSoft.
✓ https://www.nirsoft.net/utils/browsing_history_view.html
- Verify that the tool detects at least one browser (e.g., Chrome, Edge, Firefox).
- Record the browsers successfully detected.

Figure 2: The tool shows the browsing history table for Internet Explorer 10/11/Edge.

TASK 2: Viewing Local Browsing History

- Open the tool and load browsing history from the current user profile.
- Identify the last 10 websites visited.
- Note the visit time and browser type for each entry.

Task 3: Filtering by Date Range

- Use the date/time filter to display only browsing history from the last 24 hours.

Before filtering: 18352 items total history entries

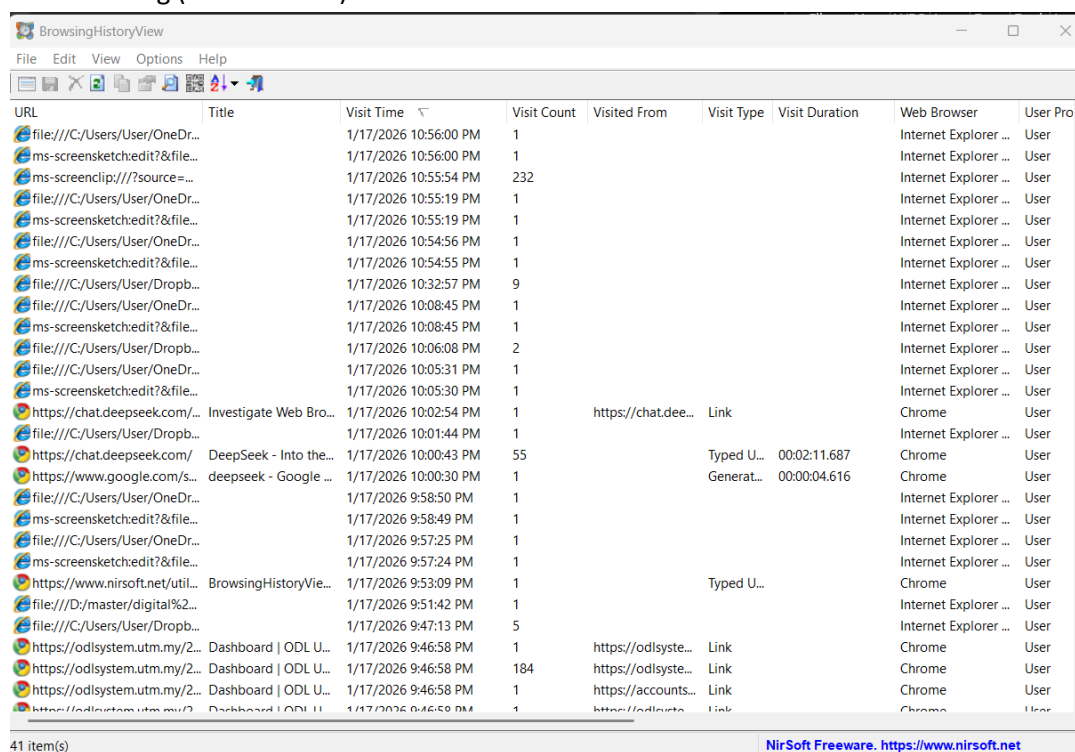

The screenshot shows the BrowsingHistoryView application window. The status bar at the bottom indicates '18352 item(s)'. The table below represents a portion of the history entries.

Figure 5: Status bar shows 41 items after time filter applied.

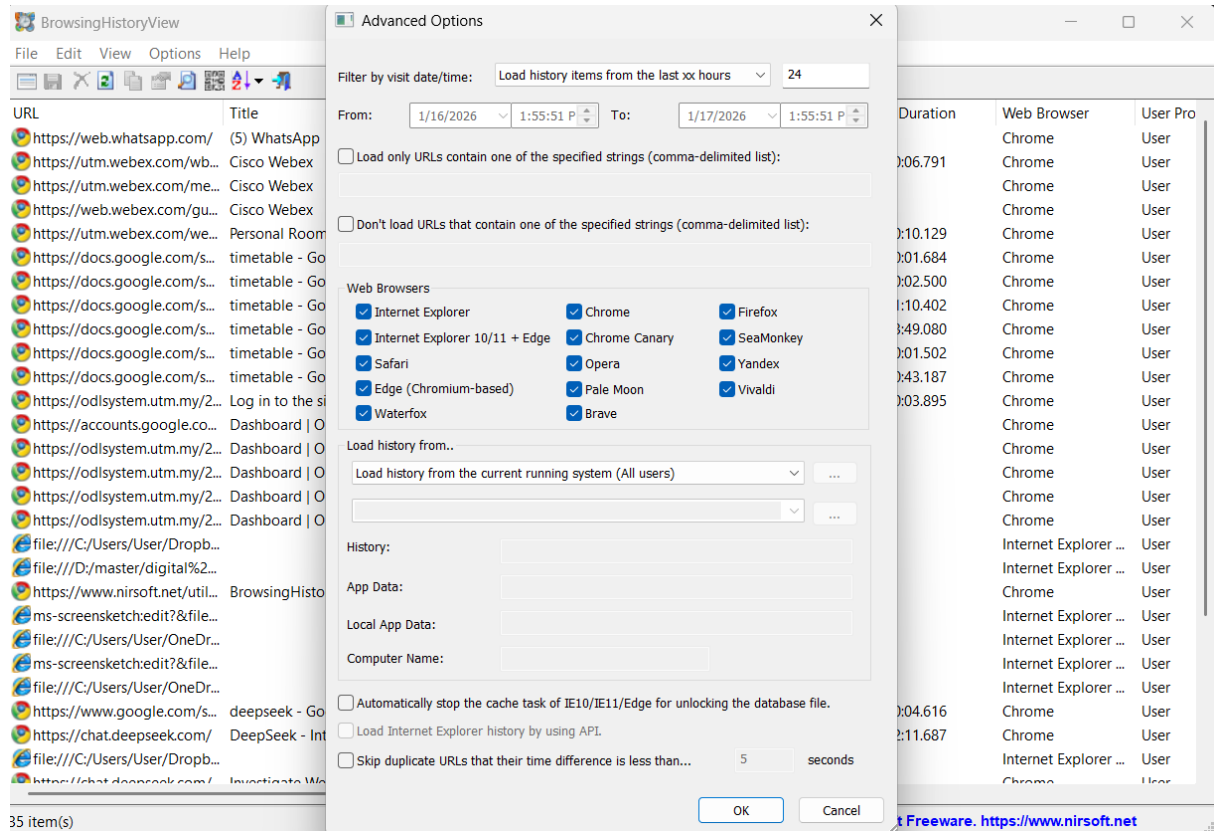

Figure 6: Setting "Last 24 hours."

- Export the filtered results into a text file.

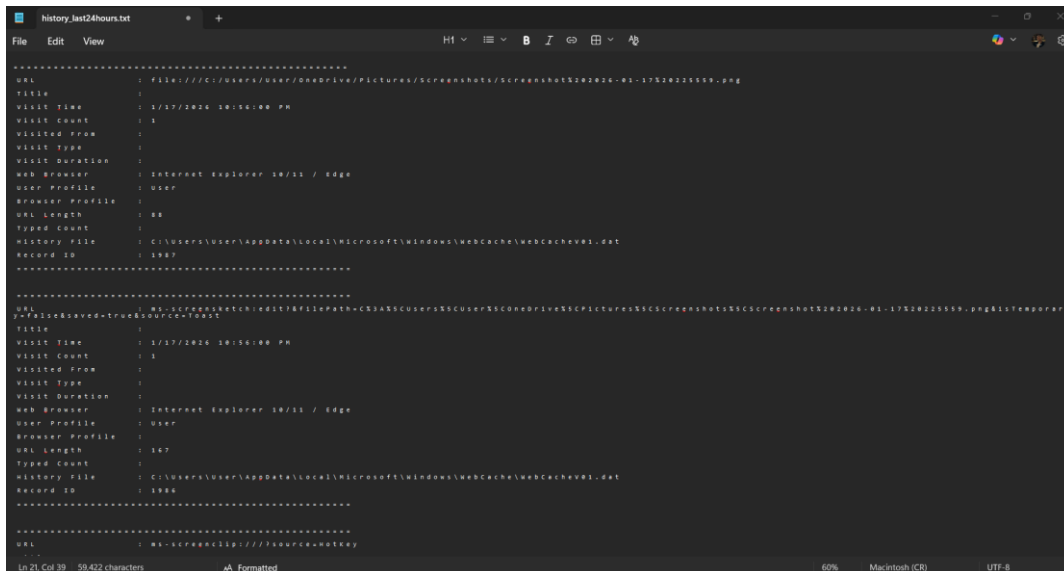

Figure 7: Text file view of history_last24hours.txt.

- Compare the number of entries before and after filtering.
Filtering by date range allows investigators to focus on a specific timeframe relevant to an incident. In this case, only 41 visits occurred in the last 24 hours, suggesting limited recent activity. This reduces data noise and helps pinpoint recent user actions, which is critical in timeline analysis or intrusion investigations.

Task 4: Filtering by Browser

- Configure the tool to show history from only Google Chrome.

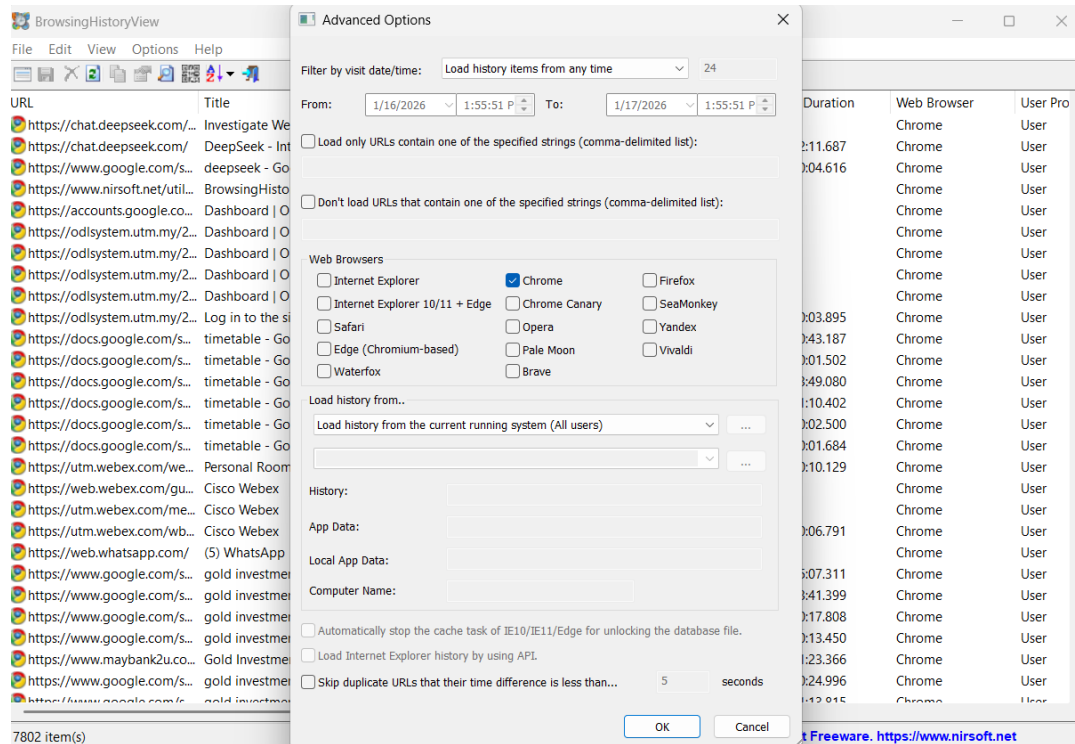

Figure 8: Only Chrome is selected.

- Identify the most frequently visited domain in Chrome.

The most frequently visited domain in chrome is odssystem.utm.my (Dashboard |ODL UTM 25/26-1).

Figure 9: History entries now show only Chrome visits.

- Discuss why filtering by browser might be useful in forensic investigations.

Filtering by browser in digital forensic investigations is highly valuable as it allows examiners to isolate and analyse user activity with greater precision. Different browsers are often used for distinct purposes such as work-related tasks in one browser and personal or recreational browsing in another making browser-specific filtering essential for reconstructing a user's behavioral patterns. Additionally, certain types of malwares, exploits, or unauthorized scripts may target specific browsers, and filtering enables investigators to quickly identify such malicious activity within the affected browser's history. This approach also aids in profiling a user's primary browser for tasks, which can support intent analysis or accountability assessment. Furthermore, browser-filtered data can be effectively correlated with other forensic artifacts, such as network logs or system events, to build a coherent and reliable timeline of activities during an investigation.

Task 5: Exporting Data

- Export browsing history into CSV format.
- Open the CSV in Excel and create a pivot table showing:
 - Number of visits per domain.

	A	B
2		
3	Row Labels	Sum of Visit Count
4	m.facebook.com	1003800
5	odsystem.utm.my	75148
6	www.ticket2u.com.my	53378
7	partners.unifi.my	50716
8	easyfix.unifi.com.my	11649
9	web.whatsapp.com	10625
10	loto4d.com	8614
11	4d4d.co	6761
12	chatgpt.com	5853
13	www.facebook.com	4578
14	www.businesslist.my	4495
15	onedrive.live.com	4341
16	www.xe.com	4243
17	docs.google.com	3735
18	gdlotto.tl	3566
19	chat.deepseek.com	3284
20	www.4dmoon.com	2691
21	drive.google.com	2569
22	hotxv.com	2083
23	www.google.com	1968
24	portal.azure.com	1927
25	mail.google.com	1279
26	mytax.hasil.gov.my	1070
27	www.foodpanda.my	953

Figure 10: Pivot Table 1 shows the domain with number of visits in excel fille.

- Distribution of visits across different browsers.

	Row Labels	Sum of Visit Count
4	Chrome	1294839
5	Edge (Chromium-based)	525
6	Firefox	105
7	Internet Explorer 10/11 / Edge	883
8	Grand Total	1296352

Figure 11: Pivot Table 2 Chrome dominates the browsing history with highest count.

Task 6: Report Generation

- Generate a HTML report of browsing history for the last 7 days. Include:
 - Website title
 - URL
 - Visit time
 - Browser type

All files uploaded to Google Drive folder:

https://drive.google.com/drive/folders/1pKbJgn0LqGn4QJa_j9DwrTC4wacqRh3L?usp=sharing

Task	File Name	File Type
3	history_last24hours	Txt file
5	BrowsingHistory_Export	CSV file
5	BrowsingHistory_Export (Pivot 1 & Pivot 2).csv	Excel file
6	last7days_history	HTML file
